Hi Eric-

Not sure if you're checking email this week---

The Word doc (auto-documentation extract?) that you sent last Fri. doesn't exactly match the chemicals in the table that you sent. However, I went through and calculated Min/Max/Mean/St. Dev for the data that was in the Excel spreadsheet that you sent with Means calculated.

Questions:

Was this queried for Cat 1 All?

How did you handle non-detects? 1/2?

Did you want the list of chemicals that are in the Word doc instead? The lists are close- a few minor differences.

If you send the entire auto-documentation file associated with the query I think it answers these questions-

Thanks!

Ben

Ben, thanks for your help. Here is what I put together for the upstream stuff. Not perfect but I think we can run with it. Maybe you can pdf it and post it.

Eric
